To whom it may concern

I, as a senior specialist in the Tamura Corporation, express our interest in the project

“Gallia properties modification by ion implantation and irradiation (Gallon)” of Dr Marco Peres from IST-ID.

Tamura is a world-class manufacturer of high quality electronic components for global markets. With 2011 sales greater than 900 Million US Dollars, Tamura Corporation is one of the largest suppliers of magnetic components and power supplies in the world. Publicly traded on the First Section Market of the Tokyo Stock Exchange, Tamura has proven financial strength, innovation and ability to grow for more than 80 years. Tamura's state-of-the-art manufacturing facilities in Asia, Europe and Mexico support leading edge technologies for the future's high demand applications.

As having experience in both scientific research and semiconductor commercial manufacturing, I declare to help the consortium with advice on the most attractive solutions and direction. In case of useful new technologies, Tamura will consider to use it on commercial basis (royalties, licence, etc).

Akito Kuramata

A handwritten signature in black ink that reads "Akito Kuramata". The signature is written in a cursive style with a long, sweeping tail on the final letter.
